**Green Line** – The Smart People Factory Green Line Overdrive is an extremely versatile JRC4558D based overdrive, with a palette of tonal options that range from **vintage** ‘808 flavors to a gainy **modern** growl. The **mud** switch adds low end and interacts beautifully with both the **drive** and **tone** controls, allowing for limitless possibility.

**Red Threat** – We set out to create the ultimate high-gain distortion. Rich harmonics, crazy feedback, and amazing low end handling. But what we came up with is so much more. From soulful blues to down-tuned hardcore; from overplayed quasi-sexual butt rock riffs to indiscriminate, over saturated wall-of-noise melodrama. This baby does it all! The **gain** knob starts by adding distortion, moves into escalating layers of feedback, and ends with a blanket of shimmering noise. Even the **tone** knob is out of control. Need we say more?

**Ego Booster** – I don’t want to toot my own horn, but this is booster bliss as it should be. Ultra high input impedance brings sparkle and life back into vintage pickups. The **tone** control provides a full range of bass and treble boost options, and switches off for uncolored, transparent boost. The **boost** control ranges from unity gain to a whopping 30 dB of tube melting boost. (It also sports a spiffy bright blue LED)

**I-5 Delay** – With a name like I-5, we knew we’d never get away with the paltry 300ms delay times most analog delays give you. So we decided to provide you with 1 second of **delay** time in a ground breaking dual digital chip design. Through the marvels of modern technology we now allow you to hear (in the future) the sounds you are creating in the present!!! WAIT! That’s not all! We also fused together the future *with the past*, by providing old-timey analog style filtering. Travel backwards in time with the **warmth** control to dial in BBD style mojo, or the natural sound of old tape delays. You can also set it for infinite **repeats**, get crashing pitch shifts with an expression pedal, or spice up your echoes with the **FX loop**.

ALL SPF PEDALS ARE HAND MADE IN THE USA AND FEATURE **TRUE BYPASS SWITCHING**, **SINGLE 9V BATTERY OPERATION**, **STANDARD DC JACK**, AND COME WITH A **FULL LIFETIME WARRANTY**.
